Profile

Full Stack Developer with a strong foundation in building web and mobile applications using React, Next.js, React Native, PHP, and Flutter. Skilled in developing responsive, high-performance, and user-centered applications with a focus on writing clean, maintainable code. I am dedicated to following best development practices across the entire stack, from frontend UI to backend logic. Highly motivated to grow in a professional environment, I focus on building modular, reusable tools and delivering efficient software solutions.

Education

MATHEMATICS BACCALAUREATE

Belkbire Abdelkader High School

- Completed secondary education with a focus on mathematics, developing strong analytical and problem-solving skills.

ATTENDED: TWO YEARS OF CIVIL ENGINEERING PROGRAM

Morsli Abdekah University

- Completed two years of civil engineering studies before transitioning to the tech field. Acquired foundational skills in technical reasoning, project planning, and logical problem solving, supporting a strong technical mindset for web development.

ADVANCED TECHNICIAN DIPLOMA IN WEB AND MOBILE DEVELOPMENT

National Institute of Specialized Vocational Training

- Specialized in full stack web and mobile development with hands on experience in **HTML, CSS, JavaScript, React, Node.js, and PHP**. Completed projects emphasizing responsive design, clean code, and user-centered applications.

Languages

Arabic – Native / Mother Tongue

Full command of reading, writing, and speaking; used in personal and professional communication.

French – Fluent, professional working proficiency

Able to communicate confidently in professional and technical contexts, including reading documentation and collaborating with French speaking colleagues.

English – Very good, strong written and spoken skills

Proficient in reading technical materials, writing code documentation, and communicating in professional or learning environments.

German – Currently learning, basic conversational level

Developing foundational reading, writing, and speaking skills to reach professional proficiency.

Skills

Frontend:

HTML5, CSS3, JavaScript (ES6+), Typescript, React JS, React Native, Next.js, GSAP, Three.js, Responsive Design, REST APIs

Backend:

Node.js, Express.js, PHP, Supabase

Databases:

MySQL, MongoDB

Authentication / Tools:

Clerk (Auth), ShadCN (UI components)

Version Control:

Git, GitHub

Tools & Workflow:

vim, neovim, VS Code, npm, Postman, Chrome DevTools

Professional Experience

Freelance Web & Mobile Developer

Self-employed — Algeria

- Developed responsive websites and mobile applications for clients, using HTML, CSS, JavaScript, React, Node.js, and PHP.
- Created and maintained online stores and business websites, ensuring user-friendly design, functionality, and performance.
- Collaborated with clients to understand requirements, deliver projects on time, and implement iterative improvements.

Freelance Graphic Designer & 3D Modeling Artist

Self-employed — Algeria

- Designed logos, banners, and visual content for web and print, meeting client branding requirements.
- Created 3D models and renders using Blender for various projects, including product visualization and creative presentations.

Piano Instructor

Self-employed / Private Lessons

- Taught piano to students of different ages and skill levels, developing individualized lesson plans and tracking student progress.
- Enhanced communication and mentoring skills, fostering patience, creativity, and adaptability.

Projects

Kaen

Real-time Community Platform for Developers

Github

(React, TypeScript, Supabase, TanStack Query)

- Built a high-performance discussion engine featuring real-time post synchronization via PostgreSQL replication, an instant global search with optimized filtering, and a recursive nested comment architecture for complex threading.
- Implemented a robust engagement system including a debounced upvoting/liking mechanism to minimize API overhead, dynamic comment counts, and granular data security through Supabase Row Level Security (RLS).
- Designed a responsive "HUD-style" interface utilizing Framer Motion's hardware-accelerated transitions, featuring adaptive Grid/List view variants and mobile-first metadata optimization.

Vex

AI Tutor SaaS Platform

Github

(Next.js, TypeScript, Supabase, Stripe)

- Built a full-stack SaaS platform that allows users to create AI tutors and chat with them in real time.
- Implemented secure authentication, protected routes, and subscription-based payments using Stripe.
- Designed a scalable architecture with modular components, server/client separation, and responsive UI using Tailwind CSS.

Archfolio

Operating System Interactive Portfolio

Github

(React, GSAP, Tailwind CSS, JavaScript)

- Built a full-scale virtual desktop environment featuring a window management system, draggable GUI components, and a custom-built file system architecture.
- Implemented a dual-mode navigation engine including a functional terminal emulator with command-line parsing and a graphical file manager for directory traversal.
- Designed a high-performance animation system using GSAP for window logic and state-driven UI transitions, ensuring a seamless user experience across modular components.

Interests

Low-Level Programming

Interested in understanding how software works close to the hardware, including memory management, system behavior, and performance fundamentals. Exploring concepts such as C, operating systems, and computer architecture.

Open Source & Technical Knowledge Sharing

Dedicated to documenting technical journeys and building tools for the developer community. Interested in creating modular, reusable components and fostering environments where engineering knowledge is accessible and structured.

Operating Systems Development

Driven by a desire to understand the fundamental interface between software and hardware by building a new kernel from scratch. This includes implementing core components such as bootloaders, interrupt handling, memory paging, and process scheduling. I am focused on mastering the intricacies of "freestanding" environments where no standard library exists, requiring a deep dive into CPU instruction sets and hardware protocols.
